

SYSTEMS AND METHODS FOR PROVIDING
STORAGE OF DATA ON SERVERS IN
AN ON-DEMAND MEDIA DELIVERY SYSTEM

Abstract of the Disclosure

5 A system and method may be provided that
allows users to store, retrieve, and manipulate
on-demand media content and data stored on a remote
server network in an on-demand media delivery system.
More particularly, the system may allow a user to
10 access his or her on-demand media account from user
equipment in different locations as long as the current
user equipment can communicate with a remote server
that stores user-specific information. The system upon
user selection may freeze the delivery of on-demand
15 media at a particular point and allow the user to
resume the media at a later time from some other
network location in system. Users may upload personal
images or files to an on-demand delivery server for
later retrieval and display. Users may be permitted to
20 assign access rights to the uploaded files.
